Greenguard Certification helps the identification of interior products and materials that have low chemical emissions, improving the quality of the air in which the products are used. It promotes global sustainability, environmental health, and safety.

As of January 2012, France has adopted regulations that limit total VOC emissions of building products. Manufacturers, selling their products in France must obtain a classification ranging from A+ (very low emissions) to C (high emissions). The declared goal is to improve indoor air quality in private/commercial buildings.

TÜV-PROFICERT-product Interior brand is a voluntary, independent label for VOC-emission and quality of floorings. The results comply with the emission thresholds of AgBB, Belgian VOC regulation, Finnish M1 classification, BREEAM Exemplary Level, LEED v4 (outside North America), RAL-UZ 120 and Austrian Eco Label (Guideline UZ 56).

An Environmental Product Declaration is a verified document that reports environmental data of products based on life cycle assessment and other relevant information in accordance with the international standard ISO 14025.

The Blue Angel is a voluntary certification that guarantees that a product or service meets high standards when it comes to its environmental, health and performance characteristics. In the process, these products and services are always evaluated across their entire life cycle.

- (a) The following products were tested: acetone, coffee, NaOH, H₂O₂ at 3%, black shoe cream.
- (b) The following products were tested: disinfectant, benzine, ammonium (NH₄OH), ethanol (C₂H₅OH), citric acid, iodine
- (c) Grade 0 - Unchanged / Grade 1 - Very little change.
With ethanol we got grade 1 after 2 hours.
- (d) Suitable for floor heating systems, according to German Federal Association Radiant Panel Heating.
