

OWENS FLOORING

When Owens flooring was developed in the early 2000's it not only created the new product category of luxury engineered hardwood (LEH), it became the benchmark for all other engineered flooring. Owens combines high-quality, super stable, Baltic birch plywood with a solid sawn face hardwood wear layer to create a truly remarkable engineered flooring product.

Made in the USA, Owens products are incredibly versatile and provide a variety of designer looks. Available as either unfinished or prefinished, Owens flooring is the product of choice for discriminating buyers for both commercial and residential applications.
